

CITRIX® Application Delivery Infrastructure

Deliver Optimal Application Performance, Information Security & Operating Costs

The right approach to application delivery is critical to delivering optimal application performance, information security and operating costs to your business. With DynTek and Citrix IT solutions, executives and their teams gain important business benefits as they tackle today's big IT initiatives. Leverage new opportunities and gain competitive advantage using application delivery infrastructure to connect application delivery to the business value of any application.

A Dynamic Delivery System

Citrix offers a new and different approach – the Citrix Delivery Center™ – transforming the data center from a static, production-oriented facility to a dynamic, service-oriented delivery center. The Citrix Delivery Center enables IT to orchestrate the delivery of application, desktop and server resources in lock-step with the needs of the business. It is an end-to-end application delivery infrastructure system that delivers applications to users, anywhere with the best performance, highest security, lowest cost and maximum agility and flexibility.

Citrix Delivery Center: Transform the data center into the delivery center.

DynTek has proven to be a go-to partner for our application delivery projects and deployment of critical access technology. Their sales and technical teams both have an astute knowledge of Citrix technologies. In addition, as with most technology environments, nothing sits in isolation and everything is connected, therefore DynTek's expertise in adjacent technologies such as networking, security and application infrastructure is highly valued. They understand how all the pieces in our infrastructure work together, and more importantly, how to keep it all working at an optimal level."

Bill Lazarus - AVP, IT Architecture and Security, St. Joseph Health System

END-TO-END APPLICATION DELIVERY INFRASTRUCTURE

The Citrix Delivery Center product family includes the four primary product lines that make up the premise-based end-to-end application delivery infrastructure. These product lines include the full breadth of market leading application delivery technologies, as well as tools for orchestrating these dynamic building blocks to help solve the challenges of application delivery.

Citrix Workflow Studio™

- Graphically compose workflows without scripting
- Easily automate IT processes across technology components
- Dynamically orchestrate systems to delivery on-demand

Citrix XenDesktop™

- Complete desktop virtualization solution
- Fast, reliable performance for users at any location
- Reduce desktop operating costs up to 40%

Citrix XenApp™

- The world's most complete Windows application delivery system
- Proven application virtualization for servers and clients
- Reduce application operating costs up to 40%

Citrix® NetScaler®

- Accelerate web application performance
- Ensure web application availability
- Improve web application security

Citrix XenServer™

- High performance server workload delivery
- Flexible provisioning for virtual and physical servers
- Live migration for optimal resource management

Application Delivery Infrastructure Technologies

Application Collaboration

Share applications online in real-time.

Application Firewall

Protect Web applications from attacks.

Application Networking

Deliver all Web applications.

Application Performance Monitoring

Monitor real-time user experience.

Application Streaming

Deliver Windows applications to user desktops.

Application Telephony

Deliver applications to IP phones and wireless devices.

Application Virtualization

Deliver Windows applications from the data center.

Web Application Security

Secure web application data access.

Desktop Virtualization

Deliver Windows desktops from the data center.

Enterprise Single Sign-On

Simplify and centrally control user passwords.

Remote PC Access

Access your personal PC over the Internet.

Remote Technical Assistance

Provide users instant support over the Internet.

Server Provisioning

Deliver server workloads on-demand.

Server Virtualization

Increase server efficiency and agility.

SSL VPN

Securely access applications over the Internet.

WAN Optimization

Improve branch office application performance.

PROFESSIONAL SERVICES

As a professional technology services firm, DynTek incorporates advances in technology, best practices and an exceptional consulting team to create solutions that make a positive impact on operations. DynTek tailors our solutions and project approach to fit the needs of our clients, while adhering to our proven delivery methodology certified by Citrix Consulting Services. We address each critical phase of the project life cycle including Analysis, Design, Build & Test and Roll-out, to ensure the optimization and success of your application delivery solution.

➤ Application Delivery Strategy Assessment

Comprehensive review and analysis of your current business requirements, processes and mandates in order to create a strategy that enables easy, secure access, while lowering your overall Total Cost of Ownership.

➤ Infrastructure Assessment

Comprehensive technical review of your current environment, which provides an in-depth evaluation of business requirements, plans, architectures, and designs of operational systems and platforms in order to create a plan for a successful application delivery implementation.

➤ Proof of Concept

Prove the viability of the solution in a test environment.

➤ Infrastructure Design, Build and Test

Create plans for business solutions and technical architecture, as well as design infrastructure and mission-critical platforms.

➤ Pilot

Deliver a prototype or pilot for a particular project in order to mitigate technical risks and/or accelerate the formation of a project team prior to the development or deployment of your IT solution.

➤ Implementation

Build and test the new environment including policy management, load testing and user acceptance.

➤ Rollout

Install, configure, integrate solution and define operations and support procedures.
