

More Intelligent Security. Less Vendor Complexity.

Choosing the Right Partner

A carefully crafted security solution will help you meet and manage your toughest business challenges -- from performance issues to content access to compliance with government regulations. And since security touches all areas of your environment, including servers, applications and endpoints, it is critical to have an integrated approach with a partner that understands your entire environment.

As a **McAfee Elite, Microsoft Gold, Cisco Gold, Citrix Platinum, VMware Premier, Dell Certified and HP Preferred Partner**, DynTek has the credentials in adjacent technologies that can assist you in creating a comprehensive and holistic security profile. You can rest assured that you will receive the optimal solution for your company's needs.

Choosing the Right Solution

McAfee offers a centralized security management platform that gives you visibility to your entire security posture from a single console. Integration across the endpoint, the network, and risk and compliance requirements helps you streamline security administration, creation and management of policies and processes, event responses, reporting, and compliance processes. You save time, conserve resources, and achieve better security with intelligent security that is automated, integrated, and optimized. Backed by a nonstop global research team and further enhanced by our partnerships, McAfee security enables you to efficiently manage risks from known and emerging threats as well as potential brand and business risks of data loss and noncompliance.

DynTek, an authorized McAfee Security Alliance Services Partner, has extensive experience in deploying McAfee's full suite of solutions. Our seasoned consultants are backed by the entire McAfee organization. They have immediate access to product developers, experts in McAfee's support organization, and other experts who have had experience with similar deployments.

THE DYNTEK DIFFERENCE
