

## Microsoft Solutions

# Optimize with Microsoft & DynTek

## Make IT a Strategic Asset

### Core Infrastructure Optimization

Businesses such as yours are concerned with reducing the cost and complexity of their IT infrastructures. Our solutions build on the power of the Windows Server® 2008 operating system to help free up valuable resources—so your people can innovate, collaborate, and drive your business forward. Additional benefits help increase system uptime and end-user productivity, enhance protection of corporate data, and simplify IT compliance.

DynTek can help you provide rich, connected capabilities across the infrastructure and help protect both your environment and your confidential data from intrusion and disruption. As a result, you'll be able to help control costs, improve service levels, and drive agility.

## Maximize Your Business Opportunities

### Application Platform Optimization

Having a flexible and responsive application platform helps your people make faster and better decisions based on business insight and brings your people, processes, and information together so you can capture business advantage. We help you build connected and adaptable systems that enable you to maximize business opportunities. Our teams of experts provide design, implementation, and support expertise to enhance the way you develop, deploy, and manage the applications that run your business. Leveraging the flexible and scalable Microsoft® Application Platform, DynTek can help you align IT with your business goals, increasing speed to market and improving your business choice.

## Streamline the Way People Do Business

### Business Productivity Infrastructure Optimization

Today's information-based economy and increasing rate of change create new demands on how people work and the infrastructure needed to support them. Our proven solutions—built on the 2007 Microsoft® Office system—can help you:

- Facilitate communication among different geographies and mobile workers.
- Boost employee productivity and collaboration.

- Provide better access to ever-increasing amounts of information.
- Simplify content management and processes.
- Provide the information users need to make better decisions.

DynTek specializes in providing complete business productivity infrastructure solutions to meet your needs. You gain the benefits of a team of IT experts—without the expense of adding more employees.

## Microsoft Technologies

DynTek has developed methodologies to address the Analysis, Design, Proof of Concept, Project Planning and Full Scale Deployment and Operations of the following Microsoft technologies:

- MOSS - Microsoft Office SharePoint® Server 2007
- Microsoft Office Communications Server 2007
- Windows Server 2003® and Windows Server 2008®
- Active Directory®
- Exchange® Server 2007
- System Center Configuration Manager 2007® (SCCM)
- System Center Operations Manager 2007® (SCOM)
- Microsoft Identity Lifecycle Manager 2007®
- Microsoft Internet Security and Acceleration (ISA) Server 2006®
- Microsoft Virtualization
- Microsoft Office® System
- Microsoft SQL® Server
- Windows Storage Server®
- Microsoft Terminal Services
- System Center Data Protection Manager 2007
- Microsoft Application Virtualization (Softgrid)

DynTek is committed to transferring knowledge, empowering you to master your Microsoft® technologies. We will work closely with your key technology suppliers and partners, including Microsoft, to ensure that all of your IT service needs are met. By leveraging our depth of experience, we help you meet today's IT challenges and achieve results from solutions built on the Microsoft platform.

## The DynTek Difference

- Over 20 years of experience integrating time-tested solutions and emerging technologies
- Understanding of the business and regulatory challenges facing organizations today
- Flexible engagement models
- Full knowledge transfer
- Multi-disciplinary expertise in security, application delivery, storage and virtualization advanced networking

## DynTek Professional Services

### Leverage our Microsoft Relationship for your Computing Needs

DynTek consultants are a logical extension of the local Microsoft team with unique access to internal Microsoft knowledge and resources. To provide the highest possible levels of service and expertise, our consultants work with Microsoft Consulting Services, Microsoft product development and additional Microsoft support groups to ensure the success of a project. In addition, we can meet other needs via custom solution services for your business, such as short-term technical project planning and technology strategy consulting.

### Microsoft Technology Strategy Consulting

DynTek, often in partnership with Microsoft's technical resources, provides expert, on-site enterprise consulting for the Microsoft platform. Our team combines in-depth knowledge of your business and industry with a detailed understanding of Microsoft's vision and technologies to help architect, implement, and deploy leading edge Microsoft technologies.

### Microsoft QuickStart Deployment Program

If you are ready to deploy products such as Microsoft Windows® 2008 Server, Microsoft Exchange 2007 Server, Microsoft Office SharePoint™ Server 2007, the Microsoft Systems Center Suite including Configuration Manager, Operations Manager and Data Protection Manager, but don't know where to start, DynTek can help. We have created a program of fixed-duration packaged and custom services delivered by DynTek consultants and managed by our Principal Consulting experts.

The Microsoft QuickStart Deployment Program is designed to match the typical lifecycle of information technology deployment projects. Services are offered for each of the main phases in this life cycle:

Evaluate	Plan	Build	Deploy	Operate
Determine whether the technology solution will meet your business objectives.	Develop the high-level architectural plan, identify risks, and develop the project plan.	Detailed design, lab work, testing, and development.	Efficient, low-risk deployment of the technology solution.	Establish the right operation procedures and support.

#### ⇒ Evaluate

The Microsoft QuickStart Evaluation Service provides workshops designed to cover the core features of the product, build consensus on the drivers for deployment, and make initial architectural decisions.

#### ⇒ Plan

The Microsoft QuickStart Planning Service provides fixed duration packaged services that rapidly produce a first pass architecture design and identify risks for the full deployment.

#### ⇒ Build (*Proof of Concept*)

Microsoft offers services to follow up on the risks identified in the plan phase; lab testing; completion of a detailed design document; creation of installation, operations, training, deployment, and communications plans; and a pilot implementation.

#### ⇒ Deploy / Migrate (*Production*)

At the conclusion of the build phase, all decisions have been made and tested so everything is ready for a rapid and trouble free deployment. Custom services are available to oversee and execute the deployment.

#### ⇒ Operate

A complete operations plan is critical for successful deployments. DynTek offers services to deliver top quality operational best practices customized for your environment.

DynTek is a leading provider of professional technology services to government, education and commercial customers in the largest IT markets nationwide. We provide a broad range of solutions that address the critical business needs of organizations today, such as IT security, voice and data convergence, enterprise access and technology management. Headquartered in Irvine, California, DynTek has over 200 employees throughout the United States and Canada.
